

ANCHORING SYSTEM FOR LUER LOCK CONNECTOR

ABSTRACT OF THE DISCLOSURE

An anchoring system includes a simply-structured device which permits a portion of a catheter or similar medical article to be easily anchored to a patient, desirably without the use of tape or needles and suture. An anchoring system for an elongated medical article comprises an anchor pad and a retainer mounted upon the anchor pad. The retainer includes a channel into which the medical article to be retained is placed. The retainer is attached to an anchor pad including an adhesive bottom surface, which can be attached to the patient's skin. A medical article is secured within a channel by retaining at least one axially extending member on the medical article.
